Abstract

This article is devoted to design of the garden in the new architectural styles using Eastern, especially Chinese principles of construction of the garden. Demonstrated the possibility a combination of combining the new trends of architecture and traditions of Asian gardens. These traditions have been evolving for centuries. Parks made according to ancient rules are world famous. In our time, the picture has changed. New parks not look like traditional parks, but retained composite laws of traditional parks. As a result, elements of the traditional garden different from modern analogues. Shows an application the garden in a specific environment of the modern city. Shows multivariate and diversity of the use of new architectural styles.

Keywords: Traditional Eastern gardens, new gardens, new trends of architecture, elements of the traditional garden
